Introduction

Citation-引文(註)

According to traditional Chinese med cine, the pericardial meridian is associated with the pain or fullness in the chest, palpitat ons, depression, restlessness, manic or depressive disorders, nausea or vomiting, hiccup, gastric pain, and distension in the upper abdomen (Bai and Baron, 2001). Since the parasympathetic modulation of both heart and gut is largely mediated by the vagus nerve, and since vagal stimulation of the gut can result in increased peristalsis while the vagal stimulation of the heart can result in decreased heart rate (Guyton and Hall, 1996), it is speculated that to some extent the pericardium meridian might be associated with the autonomic nervous modulation of the subject.

Acupuncture or acupressure at the Neiguan (P6) point, the most frequently used acupoint in the pericardium meridian, has been shown to lessen nausea and vomiting (Dundee et al., 1987, 1988, 1989a and b; Ho et al., 1989; De Aloysio and Periodic Belluomini et al., 1994; Fan et al., 1997; Harmon et al., 2000). Because na logare also related to autonomic nervous activity (Morrow et al., 1992; Morrow et al., 1992; Morrow et al., 1990), we speculated that the autonomic nervous activity might be changed a logar to the property of the point was performed.

Heart rate variability analysis is a useful non-invasive autonomic nervous modulation of heart rate. Some disease vagal modulation, and the restoration of vagal modulation is as

Chatbots in healthcare.

Artificial intelligence (AI) in medicine and digital assistance systems such as chatbots will play an increasingly important role in future doctor – patient communication ¹⁻³. To benefit from the potential of this technical innovation and ensure optimal patient care, future physicians should be equipped with the appropriate skills. Accordingly, a suitable place for the management and adaptation of digital assistance systems must be found in the medical education curriculum^{4,5}.
