獲得平臺授權的機構用戶登錄方法

根據使用者所在的不同空間位置，SpringerLink平臺的登錄方法可以劃分成以下兩大類：

1) 在校或者到館登錄

學校和圖書館的IP範圍已得到平臺授權，用戶通過桌上型電腦、筆記型電腦或者IPAD、手機等各種移動終端連接到學校或者圖書館的網路，即可自動獲得平臺存取權限。

直接輸入網址即可登錄<https://link.springer.com>。

2) 遠端登入

遠端登入方法一：VPN代理登錄

用戶在桌上型電腦、筆記型電腦或者IPAD、手機等各種移動終端上，通過VPN連接到學校或者圖書館的內部網路環境，即可自動獲得平臺存取權限。

直接輸入網址即可登錄<https://link.springer.com>。

(9) **Abstract**

Kawasaki disease (KD), an enigmatic medium vessel vasculitis, presents as an acute febrile illness predominantly affecting young children. KD appears to be a hyper-inflammatory response elicited by environmental or infectious agents (including respiratory viruses) in genetically predisposed individuals. Numerous reports from the current era of severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) pandemic have described the occurrence of KD/KD-like illness in close temporal proximity to SARS-CoV-2 infection or exposure. Notably, KD has been reported in association with H₂N₁-pdm09 virus that caused the previous pandemic a decade ago. Non-H₂N₁ influenza infections as well as influenza vaccination have also been reported to trigger KD. Herein, we report a case of H₂N₁-pdm09 influenza who developed KD. We review the published literature on influenza infection or vaccination triggering KD. This may help in a better understanding of the KD/KD-like illness associated with SARS-CoV-2. Besides, we also evaluate the safety of aspirin in influenza-triggered KD as aspirin administration in children with influenza is associated with the risk of development of Reye syndrome.

(13) **Introduction**

Kawasaki disease (KD) is an acute febrile vasculitic disorder of childhood predominantly affecting medium size arteries with a predilection for coronary arteries. KD is now the leading cause of acquired heart disease in children worldwide [1]. The illness was first reported by Dr. Tomisaku Kawasaki, a Japanese pediatrician, in 1967 when he reported a series of 50 patients [2]. Classic or 'complete' KD clinically presents with fever for at least 5 days with four of the following clinical manifestations: edema of hands and feet in the acute stage and/or subacute periungual skin peeling of fingers and toes, polymorphous

Abstract (7)

Preoperative preparation, especially bowel preparation, is a routine procedure before colorectal examinations and surgeries. Bowel preparation aims to clean the bowel and facilitate surgeries. With the popularization of Enhanced Recovery After Surgery (ERAS), the contents of preoperative preparation are constantly adjusted and improved. However, due to the particularity in the surgical procedures of NOSES, preoperative preparation is still vitally important. It involves many aspects including bowel preparation, vaginal preparation for females, and psychological preparation for patients. The most satisfactory surgical effects cannot be achieved without a comprehensive preoperative preparation.
